Archive Server for MDaemon

Setting up a network repository for email messages
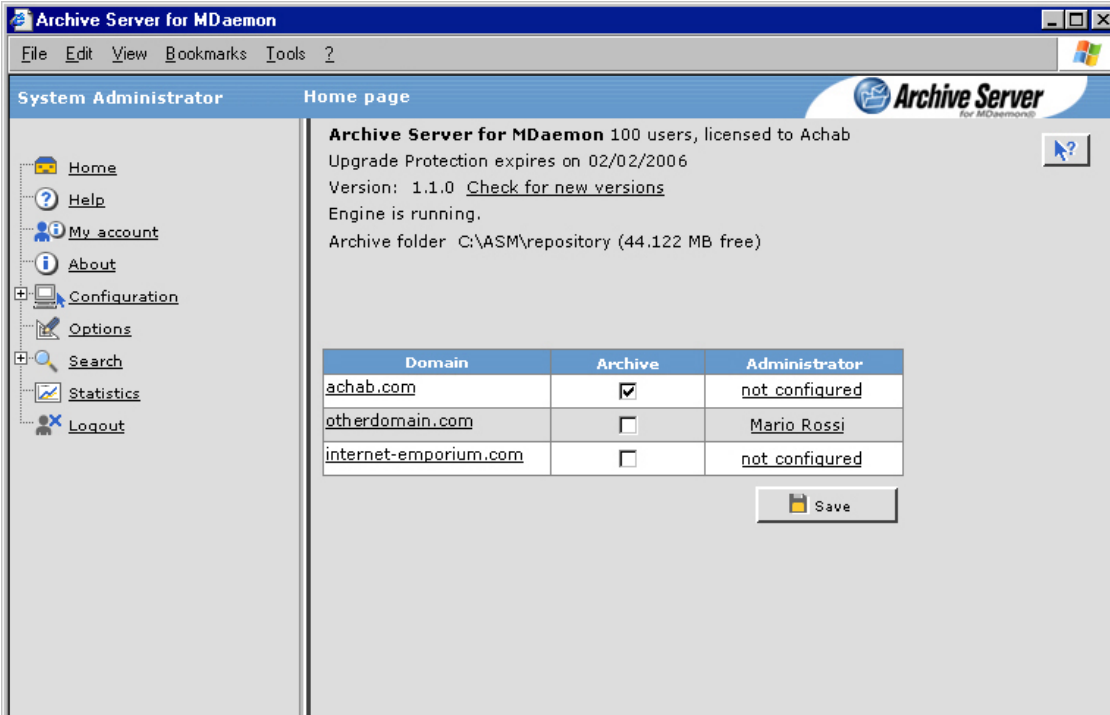

Abstract

Email archiving may waste a lot of hard disk space, if you use frequently email applications.

Thus *Archive Server for MDaemon* allow you to archive you email messages into a network share.

This document is a step by step guide to configure *Archive Server for MDaemon* to set up a network repository for email messages.

Setting up a network repository for email messages

- Logon to *Archive Server for MDaemon* as System Administrator.
- On the left menu please select the option "Configuration".

- Select "System".

- From the a pop-up please select the tab option "Archive".
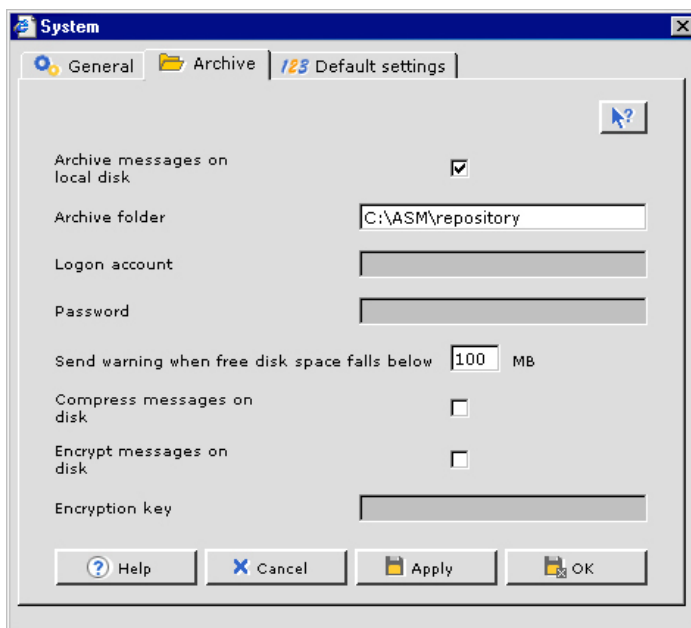

- If you wish to store the messages on a network folder, please be sure to have read/write permissions on it and deselect the check-box "Archive messages on local disk".

- Insert now the desired path and eventually the login data for network folder's access.

System

| General | Archive | Default settings |

Archive messages on local disk ☐

Archive folder   `\\server\shared_folder`

Logon account   `User_name`

Password   `•••••`

Send warning when free disk space falls below `100` MB
